

Infrared LED Lights Product Lineup

Abundant lineup, total of 56 models

Available for various applications

What is Infrared Light?

Infrared light is light that has a wavelength longer than that of visible red light and cannot be seen by the human eye. Compared to visible red light, infrared light has a low scattering rate and high transmittance rate, and therefore is used in imaging which penetrates printed patterns or liquids.

Features (1)

Penetration

Features (2)

Cancellation

Application examples

- Foreign material detection by penetrating the liquid
- Appearance inspection by cancelling the surface printings
- Contents inspection for the food package
- Various inspections utilizing a difference in spectral reflectance and more

Merits

	Infrared LED	Regular halogen light
Irradiation heat	Extremely low	Heat-generating
Influence on the workpiece	Small heat damage	Huge heat damage

Irradiation of the Infrared LED includes only the energy of specific region of wavelength, so that the irradiation heat is extremely low compared to the halogen lights and gives less damage on the workpiece.

● **Total of 56 Models** CCS has an extensive lineup of Infrared Lights.

Ring Lights

Bar Lights

Dome Lights/Flat-Dome Lights

Flat Lights

Coaxial Lights

* The LFV3-CP series and LFV3 series have different wavelength.

If you need a wavelength of 1,000 nm or more, please contact your CCS sales representative about the custom product.

Ready for the test with infrared light over 1,000 nm wavelength

CCS is deploying infrared-sensitive CCD cameras in the testing rooms where you can perform workpiece tests directly for yourself using our LED Lights. Please feel free to make an appointment. We are looking forward to helping you.

Optimal for infrared imaging

- Specifications**
BOBCAT-320 (manufactured by Xenics)
- InGaAs sensor
 - Wavelength: 0.9 to 1.7 μm
 - 320 × 256 pixels
 - Uncooled
 - C mount

Our personalized staff will be happy to suggest the lighting solution for getting optimal images.

● Imaging examples

Various applications utilizing characteristics of the infrared light

Imaging the appearance of food container

Light from the surface-mounted LED is scattered inside of the dome-shaped reflective diffusion panel. The scattered light from the wide uniform region is illuminated onto the workpiece surface evenly.

■ HPD2 series

Workpiece

Food container

Visible light Dome Light

Imaging with visible light captures characters and patterns on the container.

Infrared HPD2-400IR860

Imaging with infrared light erases the characters and patterns on the container, and captures the turning up of the cover.

* This workpiece was processed by CCS for sample imaging.

Imaging the foreign materials in food product

The dot pattern on the surface of the light-guiding diffusion plate controls the diffusion and transmission of the illuminated light. It can illuminate uniform diffused light onto the workpiece.

■ LFX2 series

Workpiece

Snack confectionery

Visible light Dome Light

It is difficult to capture the foreign materials with visible light imaging.

Infrared LFX2-200IR850

Imaging with infrared light cancels the difference in color density and captures the foreign materials.

* This workpiece was processed by CCS for sample imaging.

These images were acquired with an infrared-sensitive camera.

The sample workpieces used in this pamphlet have been processed specifically for sample imaging. They are not intended to represent product quality and performance.

Imaging the foreign materials in disinfectant product

LEDs embedded around the outside of a square light-guiding diffusion plate. Diffused illumination from a flat emitting surface.

LFL series

Workpiece

Disinfectant product

Visible light Flat Light

It is difficult to check the inside with visible light imaging.

Infrared LFL-100IR940

Imaging with infrared light penetrates the liquid and captures the foreign materials.

* This workpiece was processed by CCS for sample imaging.

Imaging the appearance of leatherware

By mounting LEDs on a flexible circuit board in a steep angle, it becomes possible to converge light in the center section from a low position.

LDR2-LA series

Workpiece

Leatherware

Visible light Ring Light

The leather and the threads are of the same color, so that it is difficult to capture the stitching.

Infrared LDR2-132IR2-850-LA

Infrared light penetrates the dye to highlight the threads and captures the stitching.

Infrared Lights IR series have been renewed

Features

(1) Unified 24 VDC input

All models are 24 VDC input and the same Control Unit is applicable for the Light Unit of equal size, regardless of the LED color such as red, white, blue, green, ultraviolet, and infrared.

(2) Revamped lineup

New size has been supported by the Flat Lights.
Coaxial Lights have been changed to the latest LFBV3 series.

(3) Improved output (940 nm type)

State of the art LEDs improved the emitting efficiency. Increased output is 1.5 times the output of the previous models. Available for wider range of applications.

IR series Specifications of the previous IR series (Scheduled to be discontinued)

LFV3-35IR2-850	850 nm		3.1 W	175 g	Applicable
LFV3-35IR2-940	940 nm				
LFV3-50IR2-850	850 nm		9.1 W	335 g	Applicable
LFV3-50IR2-940	940 nm				

* The wavelength of the LFV3-CP series is different from that of the LFV3 series.

Applicable cable	12 V Extension cable
Applicable Control Unit	12 V Control Unit

* The LDL-100X100IR850/940 are 24 VDC input.

Applicable cable	24 V Extension cable (FCB series, FRCB series)
Applicable Control Unit	24 V Control Unit (PD3/PD2/PSB/BB series, CC-ST-1024)

* Please contact your CCS sales representative if you would like to use the Light Unit in combination with a Strobe Control Unit (overdrive type).

* Refer to the back cover for other specifications.

*1 You can specify the connector of the Light Unit cable when you place an order. See below for details.

M12 Connector and Flying Leads Light Unit Cables are now available

For example, to order the “ LDR2-50IR850 ” with an M12 connector attached, specify the model name as “ **LDR2-50IR850-M12** .”

4-pin M12 Socket Connectors

Cable Length: 300 mm

Model name :
standard model name
+ “ **-M12** ”

Polarity & Signal :

- 1 : (+ 24 VDC)
- 2 : No Connection
- 3 : (- GND)
- 4 : No Connection

Flying Leads

Cable Length: 2,000 mm

Model name :
standard model name
+ “ **-FL** ”

Polarity & Signal :

- Anode(+)Brown/
- Cathode(-)Blue

Custom ordered products

Please contact your CCS sales representative about the specifications which are not satisfied by the standard products.

Wavelength change

Implementing the LEDs to achieve
more than 1,000 nm-wavelength

Feel free to contact us about any other requests such as resizing the emitting surface, cable length, installation structure and so on.

CCS is deploying infrared-sensitive CCD cameras in the testing rooms where you can perform workpiece tests directly for yourself using our LED Lights. Please feel free to make an appointment. We are looking forward to helping you.

- For using infrared products

CAUTION

- Do not expose human eyes to infrared radiation. Also, make known to all personnel concerned the risk of infrared radiation.
- When you see the LEDs of the product, you may find some LEDs lit and others do not. This is because irradiation from the LEDs sometimes include visible light. The LED emits infrared radiation even when it seems not to light, so that do not look at the radiating surface of the product directly by the naked eye. To check out the lighting failure of the LED, use a camera to do it by indirect means. You can also check it out through an LCD display of the general-purpose digital camera or mobile phone.

- “CCS” and “LIGHTING SOLUTION” are registered trademarks or trademarks of CCS Inc.

CAUTION

- To ensure proper and safe use of the product, please read the Instruction Guide completely before using the product.
- The design and specifications of this product are subject to change without notification for product improvement.
- The workpiece imaging examples included in this pamphlet are intended to serve only as references to help you select a suitable Light Unit. Please verify the functionality and conditions required for your particular application before you make a final selection. The sample workpieces used in this pamphlet have been processed specifically for sample imaging. They are not intended to represent product quality and performance.
